Sreehari Rajan

Java Application Delivery Leader | Release & Production Support | Spring Boot | DevOps | Banking Technology

Bengaluru, Karnataka, India | Sreehari_r@live.com | +91 97470 91826 | LinkedIn | YouTube

Summary

Engineering and application delivery leader with 13+ years of experience across banking and insurance platforms, including 5+ years in technical leadership. Currently lead 10 developers supporting approximately 80 production Java/Spring Boot microservices for Nationwide Building Society (NBS). Experienced in cross-functional delivery coordination, application support, production incident resolution, CI/CD governance, Linux shell scripting and IBM WebSphere exposure within NBS. Collaborate with solution and security architects, delivery managers, testers and operations stakeholders to deliver secure, reliable services. Previous Deputy Manager and Team Leader experience includes engineering management, client coordination and ISO 27001 certification leadership.

Core Competencies

- **Languages and frameworks:** Java, Python, PHP (Laravel), Spring, Spring Boot, Spring WebFlux (Project Reactor), FastAPI, J2EE, REST, SOAP, JWT, OAuth 2.0, Android (Java)
- **Architecture and design:** Large-scale distributed systems, client-server architectures, object-oriented design, data structures and algorithms, synchronous and asynchronous design patterns, scalable web services and infrastructure
- **Data:** MySQL, MongoDB, relational (transactional) and NoSQL databases, SQL and query optimisation, schema and database design
- Cloud, platforms and DevOps: Linux platform and shell scripting, IBM WebSphere (NBS), OpenShift (OCP), AWS (EKS, S3), Docker, Kubernetes, Jenkins, Harness, Git, CI/CD and release support
- **Messaging and observability:** Kafka, logging, monitoring, audit trails
- **Performance and JVM:** Garbage collection, memory management, concurrency, performance tuning; unit testing with JUnit; performance testing with JMeter, ReadyAPI, Postman, SoapUI
- **AI and agents:** LLM integration, MCP servers, agentic AI workflows, AI-assisted development
- Leadership and delivery: Application delivery coordination, release readiness, cross-team validation, production support, incident escalation, technical leadership, code/design reviews, mentoring, hiring and stakeholder status communication

Professional Experience

IBM, Advisory System Analyst (Cloud & Microservices Leader)

Oct 2021 - Present | Bengaluru, India (Hybrid)

Client: Nationwide Building Society (NBS), the world's largest building society, with 15M+ UK members across mortgage lending and savings. The Java team builds and maintains Spring Boot microservices for

core banking operations and customer interactions. Team: Payments (alongside the Banking, Lending and Party teams), responsible for critical credit card, debit card, net banking and ATM APIs.

- Technical lead for 3 years, managing a team of 10 developers and technical delivery across approximately 80 production microservices for critical payments applications; coordinate development priorities, quality reviews and operational escalations.
- Lead code and design reviews and mentor developers, setting best practices and standards for quality, security, performance, maintainability and craftsmanship.
  Applied Linux command-line and shell scripting knowledge in the NBS application environment to support troubleshooting and repeatable operational tasks.
  Worked with IBM WebSphere in the NBS environment, bringing middleware awareness to application troubleshooting and coordination with platform support teams.
- Serve as a key technical escalation point for application and production issues, coordinating investigation, root-cause analysis, corrective actions and communication with relevant engineering and support teams.
- Built customer, account and transaction services for savings, current and deposit accounts, covering account creation, balance enquiry, fund transfers, transaction processing and validation.
- Implemented secure API authentication and authorization using JWT and role-based access control.
- Built reporting and analytics capabilities for customer activity, account utilization and transactions.
- Serve on the IBM and NBS technical hiring panels and mentor new recruits across the 160-developer NBS business unit.
- Coordinate with client solution and security architects, build and delivery managers, designers and testing SMEs through refinement, solution validation and build handoff; clarify dependencies, raise delivery risks and communicate technical status.
- Design and build large-scale services and infrastructure for critical payments APIs, making architectural trade-offs between synchronous and asynchronous patterns (REST, Spring WebFlux, Kafka) for scalability, latency and resilience.
- Support controlled application delivery through JUnit testing, peer review, Git-based version control and Jenkins/Harness CI/CD pipelines, promoting release quality and adherence to engineering standards.

Reliability and Incident Reduction

- Implemented logging, monitoring, observability and audit trails across services for transaction traceability, compliance and faster incident analysis.
- Handled 10 P1 production incidents in 2026 as part of application support, investigating failures across approximately 80 services, guiding remediation and supporting restoration within incident SLA windows of 8–18 hours.
- Built LISA (below), which runs before services go to the NFT (performance testing) team and catches memory leaks, code that needs optimization and SLA misses (for example, APIs missing a 500 ms response time and 15 TPS throughput target), with detailed reports. In its first 2 months it flagged issues on 10 APIs.

- Introduced AI-assisted code reviews (Code Lens agent) to catch defects and quality issues before they reach production.

Agentic AI and Innovation

- **LISA (Lifecycle Inspection and Analysis):** Created a performance-testing and analysis tool for NBS as an innovation initiative. It integrates LLMs and MCP servers, uses Python engines for file reading and report generation, and is delivered as an IntelliJ plugin and through the Claude run command. The goal is a unified testing platform for NBS.
- **Design-to-Build agent:** Built an agent that accelerates turning designs into working service code.
- **Code Lens agent:** Built an agent that assists with code reviews.
- Critical resource for implementing agentic AI in the client environment, evangelising AI tooling to improve engineering productivity.

Toyota Tsusho Insurance Broker India Pvt Ltd

Jan 2017 - Oct 2021 | Bengaluru, India | Technical leadership: Apr 2019 - Oct 2021

Deputy Manager (Apr 2021 - Oct 2021)

- Architect in charge of web applications built on Java microservices, including new data analytics functionality.
- Tuned web application performance: web service optimisation, SQL query optimisation and overall response time.
- Led the company's ISO 27001 information security certification, coordinating with the external consultancy Samudita (Bangalore) and cross-functional teams to meet security and compliance requirements.

Team Leader and Assistant Manager (Apr 2019 - Apr 2021)

- Recruited, mentored and managed engineers while overseeing development delivery and technical operations for the Yamaha OEM dealer insurance platform (We Care Yamaha), including stakeholder follow-ups and delivery coordination.
- Designed and built RESTful APIs with JWT and OAuth 2.0, and integrated third-party REST and SOAP APIs (payment and SMS gateways) with TATA, HDFC, Religare and Star India. Also worked with PHP web applications on the Laravel platform.
- Handled requirements gathering, proposals, client follow-ups and Scrum management.
- Led design and delivery of large-scale client-server distributed platforms: the Toyota car insurance issuance platform and the Yamaha Motors We Care Yamaha program (about 5 years across both).
- Worked with multiple insurers (National Insurance, Tata AIG, HDFC Ergo, IFFCO Tokio): attended their technical leadership meetings, presented platform features and security, collected feedback and implemented it.
- Used SQL relational databases as the base datastore for the Toyota and Yamaha platforms, with some modules on MongoDB.

Associate Web Developer (Jan 2017 - Apr 2019)

- Lead developer for InstaInsure, a B2C insurance selling platform; also built Toyota Protect for Toyota car customers, an MIS tool for business teams, and an HDFC Ergo campaign app, working with PHP web applications on the Laravel platform.

Hardesen Technologies

Software Developer and Technology Evangelist | Feb 2013 - Nov 2016 | Trivandrum, India

- Built J2EE applications (JSP, Servlets), REST and SOAP web services, and Android apps using object-oriented design and Agile practices.
- Integrated third-party APIs (PayPal, Google, Facebook, eBay) and handled relational databases and version control.

Personal Projects

- **Multi-stream live broadcasting platform (in progress):** Building a platform to broadcast one live stream from OBS Studio to YouTube, Facebook and Instagram at once, for the SreeStories (my YouTube channel), as a way to learn restream-style scalable streaming pipelines. Architecture: OBS Studio, NGINX RTMP ingest, FFmpeg distribution. Stack: Spring Boot streaming orchestration API, Laravel dashboard and user management, Docker, cloud hosting.
- **Android voice recorder app:** Built a voice recording android app named WaveStudio Pro in Java for my SreeStories Youtube channel.

Education

- **Master's Degree, Computer Science**, Amrita Vishwa Vidyapeetham, 2012 - 2014 (ACM ICPC 2012, 2013)
- **Bachelor's Degree, Computer Science**, Amrita Vishwa Vidyapeetham, 2007 - 2010

Certifications

- Claude Certified Developer - Foundations, Anthropic (2026)
- IBM Generative and Agentic AI Foundation, IBM (2026)
- IBM Banking Industry Jumpstart, IBM (2026)
- IBM Certified Advocate - Cloud v1; Build Smart on Kubernetes; IBM Cloud Essentials v3, IBM (2021)
- AWS Certified Cloud Practitioner, AWS (2022)
